*Note also, that the Exchequer openeth eight
dayes before any Terme begins, (except Trinity
Terme) in which it openeth but foure dayes be-
fore.*

A description of the foure quarters of the yeare.

And first of Winter.

☉ in ♊ ☿ ☿

Winter quarter (after the Astronomers accompt) began the 12 day of Decemoer 1636 and continueth untill the 11. day of March 1637. So that alwaies the first part of the Astronomicall winter is in one politique yeare, and the latter end thereof in the other; at which time was the shortest day of the yeare, by reason of the Sunnes greatest declination from the Equinoctiall line.

This season of his owne naturall disposition is knowne to be cold and moist, contrary to the quality of Summer, and in this quarter the inward parts of man are very hotte, and being healthfull may receive plenty of food, because naturall heate is now comforted, and is gone inward and there increased, and maketh digestion the better.

How the weather will be therein disposed, is noted for each day throughout the quarter.

The

Dade 1637.

The sicknesses that accompany this quarter, wherewith many will be grieved, are these and such like; namely, paine in the stomacke, laskes of sundry sorts, the Cholicke & illiack passion, falling sickenes and swoonings, diseases proceeding of rottenesse and corruption of humors, Coughes, thin Rheumes, headach, with other infirmities.

*Of the second part of the yeare
called the Spring.*

☉. in ♋. 8. II.

The Sunne having fully finished the winter quarter with the last part of Pisces, be-
ginneeth the Springe the 11. day of March,
then entring into the first minute of Aries,
the Equinoctiall signe, and maketh the day
and night of equall length, and continueth
untill the 12. of Iune.

This season of his naturall quality, is hotte
& moist temperatly, & likewise very health-
full, and is therefore accounted the fittest
time in the yeare to ease diseased bodies in,
and to restore health againe to those in whom
formerly it hath bene decayed by any kinde
of

A Prognostication.

of evacuation.

The particular condition thereof may be seene in the daily disposition of the season.

The sicknesses of this quarter, are melancholy, madnesse, the falling sicknesse, bleeding at the nose, hoarsenesse, coughes, itch, scales, many ulcers and small apostumes, the gowte and paine in the joynts, plurises, dropies, pestilent Agues, shortnesse of breath, faintings, paine in the head, eyes and stomacke, rotten fevers, new agues, and other strange diseases.

*Of the third part of the yeare
called Summer.*

☉ in ♋. ♏. ♏.

THe third part of the yeare Astronomicall, called the Summer quarter, alwaies taketh his beginning at the Sunnes entrance into the first degree of Cancer the 12. of Iune, at which time he maketh his greatest declination toward the North from the Equinoctiall, and causeth the longest day, and shortest night in the yeare; and so Summer holdeth on till the 13. day of September following.

The

Dade 1637.

The predominate qualities of this season (according to his proper nature) are heate and drynesse, spreading them abroad in each part of the body.

As for the disposition of the weather, you may see in the daily inclination.

The sicknesses at this time are divers, as burning agues, plurises, frensies, hotte aposthums, divers paines in the head, sundry inflammations and new infimities, proceeding especially of hot chollerick humors, wherewith many will before vexed.

Of the fourth part of the yeare called Autumne, or fall of the leafe.

Q. in α . m. 7.

THe Haruest quarter (or fall of the leafe) beginneth at the time of the Sunnes departure from the last scruple of the 30. degrees, of Virgo into the first minute of the second Equinoctiall signe Libra, being the 13. day of September, and doth last untill the 12. day of December, when the Sunne doth enter into Capricorne.

This season is naturally inclined to be cold
and

A Prognostication.

and dry, yet it is evermore disposed to be un-
constant and variable, by meanes whereof it
is the nurse of most sicknesses hapning in the
spring.

And how the ayre is like to be inclined
throughout all harvest, may be seene in the
daily disposition of the season.

The diseases and sicknesses most like to
molest men in this quarter, are these, and the
like, as namely, opelations in the spleene, co-
stivenesse, shortnesse of breath, fretting in
the bowells, falling sicknesse, and many o-
ther melancholly effects, paine in the sides,
as stiches and crampes, or convulsions,
dropfies siaticae, the strangurie, chollicke,
and many more.

A Prognostication

A Brieve description how the Planets are placed about the Earth in the Skie, for every Moneth after Sun-setting, or before his rising; by which you may perceive how they keep their motion day and night all the yeare. Moreover, the New, Full, and Quarters of the Moone, with Astrologicall judgments of the weather for each day of the yeare.
